Stone Handlers™ Can Carry the Job

Stone Construction Equipment, Inc. has added a new product category to its over 360 products - Stone Handler™ Material Moving Equipment. This new product line has two distinct product lines - the Stone Mud Buggy™ concrete

buggy line and the Stone Lift Jockey™ block lifter line. Lynne Woodworth, President and COO of Stone said on introducing the Stone Handlers that, "They take Stone in a whole new direction that provides more opportunities for our customers

and our company. The Stone Handlers complement our current product offering and help us maintain our leadership position in the equipment industry."

The Mud Buggy features a 16 cu. ft. walk-behind or ride-on machine

powered by a 13 hp Honda engine. The Buggy has the capacity to move and dump up to 2,500 lb. loads easily. Features on the Buggy include a heavy-duty polyethylene tub and lift-away engine cover; a fold-up operator platform; an extra large

platform-mounted service brake and a large eight-gallon fuel tank. All operator controls are centrally located and within easy reach. The Buggy can be ordered with optional foam-filled tires and an electric-start engine. Optional Quick-Release Tire Hubs (patent under review) are also available. The system quickly removes the outer tires to al-

low the Buggy access through doorways.

The Lift Jockey easily moves and lifts to heights of nine feet six inches, pallets, blocks, packaged material or anything else that needs handling on the job. It is available in a choice of three masts that lift loads of up to 1,500 lbs. to heights of 7' 6", 8' 6" or 9' 6".

The Lift Jockey is powered by an electric start
